

GrabYourDealz.com

Website Requirement & Development Specification Document

Project Name: GrabYourDealz

Domain: grabyourdealz.com

Website Type: Coupon, Deals, Discount Codes, Store Directory, Reviews & Affiliate Content Platform

Document Version: 1.0

Prepared For: Website Development Team

Prepared By: Muhammad Ali Abrar

Date: 19 Aug 2026

1. Project Overview

GrabYourDealz.com will be a multi-region coupon and deals discovery platform where users can discover:

- * Discount coupons
- * Promo codes
- * Deals and offers
- * Online stores/brands
- * Store-specific coupons
- * Blogs and shopping guides
- * Brand/store reviews

The website will primarily operate as an affiliate marketing platform, where users can discover offers on GrabYourDealz and then be redirected to merchant websites through affiliate tracking links.

The website should be designed to be:

- * Fast
- * Modern
- * Mobile responsive
- * SEO friendly
- * User friendly
- * Scalable
- * CMS driven
- * Easy to maintain
- * Optimized for affiliate conversions

The website should combine the best structural and functional concepts from the following reference websites:

Reference Websites:

1. www.revounts.com.au
2. www.coupenzo.com
3. www.couponfollow.com

Important: GrabYourDealz should NOT be a direct copy of these websites. The references are provided only to understand the desired structure, user experience, coupon presentation, store directory, content organization and overall coupon/deal platform concept.

2. Main Website Objectives

The primary objectives of GrabYourDealz.com are:

1. Help users find active coupons and deals.
2. Allow users to browse stores by region/country.
3. Provide individual store pages containing available coupons and deals.
4. Provide useful shopping-related blog content.
5. Provide store/brand reviews.
6. Generate affiliate clicks and conversions.
7. Build organic SEO traffic through stores, coupons, blogs and reviews.
8. Create a scalable platform that can support multiple countries and regions.
9. Allow all major website content to be managed through an internal CMS.
10. Make the website architecture suitable for future expansion.

3. Target Regions

The website will support multiple regions/countries.

Initial regions may include:

- * United States — US
- * United Kingdom — UK
- * Australia — AU
- * Canada — CA
- * Germany — DE
- * France — FR
- * Italy — IT
- * Netherlands — NL

The architecture must be built so that additional countries can easily be added later from the CMS.

4. Core Website Pages

The main website will contain the following pages:

1. Homepage
2. Stores
3. Coupons
4. Blogs
5. Reviews
6. About Us
7. Terms & Conditions
8. Privacy Policy
9. Contact Us

5. Website Navigation

The primary navigation/header should contain:

- * Logo — GrabYourDealz
- * Home
- * Stores
- * Coupons
- * Blogs
- * Reviews
- * About Us
- * Contact Us
- * Search
- * Region/Country selector

The exact header design will be finalized during UI/UX design.

6. Homepage

The homepage will be the primary landing page of GrabYourDealz.

It should immediately communicate that GrabYourDealz helps users find the latest coupons, deals and discounts.

6.1 Homepage Structure

Recommended structure:

Section 1 — Header

Include:

- * GrabYourDealz logo
- * Main navigation
- * Search
- * Country/region selector
- * Mobile menu

Section 2 — Hero/Search Area

The hero section should contain a prominent search functionality.

Example:

Headline:

“Find the Best Coupons, Deals & Promo Codes”

Search placeholder:

“Search for a store or brand...”

Users should be able to search for:

- * Store names
- * Brand names
- * Coupons
- * Deals

Section 3 — Featured/Top Brands

Display selected popular or top brands.

Each brand card may contain:

- * Brand logo
- * Brand name
- * Number of available coupons
- * Short discount/deal information
- * View Deals / View Coupons button

The brands displayed here should be controlled from the CMS.

Possible CMS setting:

Featured Brand = Yes/No

Section 4 — Top Coupons / Deals

Display selected/high-performing coupons.

Each coupon card should potentially show:

- * Store logo
- * Store name
- * Coupon/deal title
- * Discount amount
- * Coupon type
- * Coupon code availability
- * Expiry date, where applicable
- * CTA button

Example CTA:

“Get Code”

“Get Deal”

“Shop Now”

Section 5 — Popular Stores

Display a selection of popular stores.

This section should be dynamically controlled from CMS.

Section 6 — Top/Featured Blogs

Display selected blog articles.

Each blog card should contain:

- * Featured image
- * Blog title
- * Short excerpt
- * Publication date
- * Category
- * Read More button

CMS should allow blogs to be marked:

Featured = Yes/No

Section 7 — Popular Categories

Examples:

- * Fashion
- * Electronics
- * Travel
- * Beauty
- * Food
- * Software
- * Home & Garden
- * Health & Fitness

Categories should be manageable through CMS.

Section 8 — Why GrabYourDealz

Short informational section explaining why users should use the platform.

Content:

To be provided

Section 9 — Newsletter / Email Signup

Optional section for collecting user emails.

Example:

“Get the latest deals and coupons directly in your inbox.”

Fields:

* Email address

* Subscribe button

Privacy/consent text should be included where required.

Section 10 — Footer

Footer should contain:

Navigation

- * Home
- * Stores
- * Coupons
- * Blogs
- * Reviews
- * About Us
- * Contact Us

Legal

- * Privacy Policy
- * Terms & Conditions

Other

- * Social media links
- * Copyright
- * Country/region selector

Social media accounts:

Instagram, Facebook, LinkedIn

7. Stores Page

URL structure recommendation:

/stores/

The Stores page will display all stores/brands available on GrabYourDealz.

The stores will be entered and managed through the CMS.

7.1 Store Organization

Stores must be associated with a specific region/country.

For example:

United States

- * Amazon US
- * Walmart
- * Nike
- * [etc.]

United Kingdom

- * Amazon UK
- * ASOS
- * Argos
- * [etc.]

Australia

- * [Brand]
- * [Brand]
- * [etc.]

The same brand may potentially exist in multiple regions but should be treated as a region-specific store/market where necessary.

7.2 Stores Page Features

The page should include:

- * Search stores
- * Region/country filter
- * Category filter
- * Alphabetical sorting
- * Popular stores
- * Featured stores
- * Number of available coupons
- * Store logos
- * Store names

Recommended filters:

Country

Category

A-Z

Popular

8. Individual Store Page

Each store should have its own SEO-friendly page.

Recommended URL:

/stores/store-name/

Example:

/stores/example-store/

8.1 Store Page Structure

The individual store page should contain:

Store Header

- * Store logo
- * Store name
- * Short description
- * Region
- * Website/merchant link
- * Available coupon count
- * Rating/review summary, if applicable

Store Description

Content entered from CMS.

Description:

[TO BE PROVIDED THROUGH CMS]

Active Coupons

Display all active coupons for that particular store.

Each coupon should show:

- * Coupon title
- * Discount
- * Coupon type
- * Code / deal
- * Expiry
- * Terms
- * CTA

Deals

Display active deals associated with the store.

Store Reviews

Display reviews associated with that store.

Related Blogs

Display relevant blog posts related to the store.

FAQ

Optional SEO section.

FAQs should be manageable through CMS.

9. Coupons Page

URL:

/coupons/

The Coupons page will display all available coupons/deals across the platform.

9.1 Coupon Listing

Each coupon card may contain:

- * Store logo
- * Store name
- * Coupon title
- * Discount
- * Coupon code/deal
- * Expiry date
- * Coupon type
- * CTA button
- * Verification status
- * Last verified date

9.2 Coupon Types

CMS should support different coupon types, such as:

- * Coupon Code
- * Promo Code
- * Discount
- * Sale
- * Deal
- * Free Shipping
- * Cashback
- * Percentage Off
- * Fixed Amount Off
- * Other

9.3 Coupon Filters

Recommended filters:

- * Country
 - * Store
 - * Category
 - * Coupon type
 - * Discount type
 - * Expiring soon
 - * Latest
 - * Popular
 - * Verified
-

9.4 Coupon Sorting

Recommended options:

- * Latest
- * Most Popular
- * Highest Discount
- * Expiring Soon
- * Featured

10. Coupon Detail / Interaction

When a user clicks a coupon CTA, the system should support affiliate tracking.

Example flow:

User → GrabYourDealz → Click Coupon → Affiliate Tracking URL → Merchant Website

The exact affiliate network/tracking implementation will be provided separately.

Affiliate network(s):

[TO BE PROVIDED]

Tracking requirements:

[TO BE PROVIDED]

11. Blogs Page

URL:

/blogs/

The Blogs page will display articles uploaded through the CMS.

All blog content will be managed internally.

11.1 Blog Listing

Each blog card should contain:

- * Featured image
- * Title
- * Short description/excerpt
- * Category
- * Author
- * Publication date
- * Read More button

11.2 Blog Categories

Categories should be manageable from CMS.

Examples:

- * Shopping Guides
- * Deals
- * Fashion
- * Electronics
- * Travel
- * Beauty
- * Technology
- * [TO BE PROVIDED]

12. Individual Blog Page

Recommended URL:

/blogs/blog-title/

Each blog page should support:

- * SEO title
- * Meta description
- * Featured image
- * H1 title
- * Author
- * Publication date
- * Updated date
- * Content
- * Internal links
- * Related coupons
- * Related stores
- * Related blogs
- * Social sharing
- * FAQ section, where applicable

CMS should allow the administrator to control SEO fields.

13. Reviews Page

URL:

/reviews/

The Reviews page will display reviews manually created and managed through the CMS.

These may be reviews of:

- * Stores
- * Brands
- * Services
- * Products
- * Shopping experiences

Review structure:

- * Brand/store name
- * Logo
- * Rating
- * Review title
- * Review content
- * Pros
- * Cons
- * Author
- * Date
- * Related store
- * Related coupons

14. Individual Review Page

Recommended URL:

/reviews/review-name/

Possible structure:

- * Store/brand logo
- * Brand name
- * Overall rating
- * Review title
- * Review content
- * Pros
- * Cons
- * Verdict
- * Available coupons
- * Related blogs
- * FAQ
- * CTA

All information should be CMS controlled.

15. About Us

URL:

/about-us/

Content will be provided separately.

Required content:

- * Company introduction
- * Mission
- * Vision
- * How GrabYourDealz works
- * Why users should trust GrabYourDealz
- * Affiliate disclosure, if applicable
- * [TO BE PROVIDED]

16. Terms & Conditions

URL:

/terms-and-conditions/

Content:

[TO BE PROVIDED]

The page should be editable through CMS or implemented as a static legal page depending on final requirements.

17. Privacy Policy

URL:

/privacy-policy/

Content:

[TO BE PROVIDED]

The website should account for applicable privacy/cookie requirements for the countries being targeted.

18. Contact Us

URL:

/contact-us/

The Contact page should contain a contact form.

Recommended fields:

- * Name
- * Email
- * Subject
- * Message
- * Submit button

Optional:

- * Company
- * Phone
- * Reason for contact

Contact email:

[TO BE PROVIDED]

Success message:

[TO BE PROVIDED]

19. Search Functionality

The website should have a global search feature.

Users should be able to search for:

- * Stores
- * Brands
- * Coupons
- * Deals
- * Blogs
- * Reviews

Search results should be clearly categorized.

Example:

Search: Nike

Results:

Stores → Nike

Coupons → Nike Coupons

Blogs → Nike-related articles

Reviews → Nike Review

Search should ideally provide suggestions/autocomplete.

20. Region / Country System

The website must be designed with a multi-region architecture.

Each store, coupon, deal and relevant content item should be assignable to one or more countries/regions.

Example:

Store

Nike

Country:

* US

* UK

* AU

Coupon

Nike 20% Off

Country:

* US

This prevents users from seeing irrelevant regional offers.

21. CMS Integration

The entire website should be CMS driven.

The CMS will be developed as part of the project.

There will initially be:

One CMS user/admin.

The CMS should control website content without requiring developer intervention.

Major CMS-managed entities should include:

- * Stores
- * Coupons
- * Deals
- * Blogs
- * Reviews
- * Categories
- * Countries/Regions
- * Featured content
- * Homepage sections
- * SEO fields
- * Legal pages
- * Contact information
- * Site settings

The detailed CMS feature specification will be provided separately.

22. Store CMS Requirements

Each store should have fields such as:

- * Store name
- * Store slug
- * Store logo
- * Store banner/image
- * Store description
- * Country/region
- * Category
- * Merchant website
- * Affiliate URL
- * Tracking URL
- * Featured status
- * Popular status
- * Active/inactive status
- * SEO title
- * Meta description
- * Meta keywords, if required
- * Canonical URL
- * Store FAQs
- * Related blogs
- * Rating
- * Review information

Additional fields:

[TO BE PROVIDED]

23. Coupon CMS Requirements

Each coupon should support:

- * Coupon title
- * Coupon description
- * Store
- * Country/region
- * Coupon code
- * Affiliate URL
- * Discount value
- * Discount type
- * Coupon type
- * Start date
- * Expiry date
- * Status
- * Featured status
- * Verified status
- * Last verified date
- * Terms & conditions
- * CTA text
- * Tracking information
- * SEO fields

24. Deal CMS Requirements

Deals should support:

- * Deal title
- * Store
- * Description
- * Image
- * Discount
- * Deal URL
- * Affiliate URL
- * Country
- * Start date
- * Expiry date
- * Featured status
- * Active/inactive status

25. SEO Requirements

SEO should be a major consideration from the beginning.

The website architecture should support:

Technical SEO

- * Clean URLs
- * SEO-friendly slugs
- * XML sitemap
- * Robots.txt
- * Canonical URLs
- * Proper heading hierarchy
- * Schema markup
- * Fast loading
- * Mobile responsiveness
- * HTTPS
- * Breadcrumbs
- * Internal linking

CMS SEO Fields

For important content types:

- * SEO Title
- * Meta Description
- * Canonical URL
- * OG Title
- * OG Description
- * OG Image
- * Index/Noindex
- * Follow/Nofollow where required

26. Recommended URL Structure

Examples:

Stores

/stores/

/stores/nike/

Coupons

/coupons/

/coupons/nike-20-percent-off/

Blogs

/blogs/

/blogs/best-fashion-deals/

Reviews

/reviews/

/reviews/nike-review/

The exact URL architecture can be finalized during technical SEO planning.

27. Breadcrumb Navigation

Breadcrumbs should be implemented on internal pages.

Example:

Home → Stores → Nike

Home → Coupons → Nike → 20% Off

Home → Blogs → Fashion → Article

Home → Reviews → Nike Review

This will improve usability and SEO.

28. Affiliate Tracking

GrabYourDealz is an affiliate platform.

The website should therefore be designed with affiliate tracking in mind.

The system should allow affiliate links to be stored and managed through CMS.

Basic flow:

1. User visits GrabYourDealz.
2. User searches for a store/deal.
3. User opens coupon/deal.
4. User clicks CTA.
5. Affiliate tracking URL is triggered.
6. User is redirected to merchant website.
7. Affiliate network tracks the click/conversion.

Affiliate network details:

[TO BE PROVIDED]

29. CTA System

CTA buttons should be configurable depending on the offer type.

Examples:

- * Get Code
- * Show Code
- * Get Deal
- * Shop Now
- * View Deal
- * Claim Offer
- * Visit Store

The CTA text should ideally be manageable from CMS.

30. Responsive Design

The website must be fully responsive.

It should work correctly on:

- * Desktop
- * Laptop
- * Tablet
- * Mobile

Mobile should not simply be a scaled-down desktop design.

The mobile experience should prioritize:

- * Search
- * Coupons
- * Store navigation
- * CTA buttons
- * Fast loading
- * Easy scrolling

31. Performance Requirements

The website should be optimized for performance.

- * Image optimization
- * Lazy loading
- * Minified CSS/JS
- * Efficient database queries
- * Caching
- * CDN compatibility
- * Server-side optimization
- * Lightweight frontend
- * Core Web Vitals

Target:

Fast page load and good Google PageSpeed/Core Web Vitals performance.

Exact performance targets:

[TO BE PROVIDED]

32. Design Direction

The design should be inspired by the three reference websites but have a unique GrabYourDealz identity.

The design should feel:

- * Modern
- * Trustworthy
- * Clean
- * Professional
- * Conversion-focused
- * Easy to navigate
- * Coupon/deal oriented

Avoid an overly complicated interface.

The main focus should be:

Search → Discover → View Coupon/Deal → Click → Merchant

33. Branding

Website Name:

GrabYourDealz

Domain:

www.grabyourdealz.com

Logo:

[TO BE PROVIDED]

Primary colors:

[TO BE PROVIDED]

Secondary colors:

[TO BE PROVIDED]

Font:

[TO BE PROVIDED]

Design inspiration:

- * Revounts
- * Coupenzo
- * CouponFollow

34. Footer Requirements

Footer should contain:

Main Navigation

- * Home
- * Stores
- * Coupons
- * Blogs
- * Reviews
- * About Us
- * Contact Us

Legal

- * Privacy Policy
- * Terms & Conditions

Other

- * Country selector
- * Social media
- * Copyright
- * Affiliate disclosure, if required

35. Analytics & Tracking

The website should be compatible with:

- * Google Analytics
- * Google Search Console
- * Google Tag Manager
- * Meta Pixel, if required
- * Affiliate tracking
- * Conversion tracking
- * Event tracking

Tracking requirements:

[TO BE PROVIDED]

36. Recommended User Journey

The ideal user journey should be:

Journey A — Search

Homepage

↓

Search Store

↓

Store Page

↓

Coupon

↓

Get Code / Get Deal

↓

Affiliate Redirect

↓

Merchant

Journey B — Google SEO

Google

↓

Store/Coupon/Blog Page

↓

User discovers offer

↓

Coupon/Deal

↓

Affiliate CTA

↓

Merchant

Journey C — Blog

Google

↓

Blog

↓

Related Store/Coupon

↓

Coupon

↓

Affiliate CTA

↓

Merchant

37. Internal Linking Strategy

The website should support strong internal linking.

Example:

Blog → Store

Blog → Coupon

Store → Coupon

Store → Review

Review → Store

Coupon → Store

Store → Related Blogs

This should help both users and SEO.

38. Featured Content System

CMS should allow administrator to mark content as featured.

Examples:

- * Featured Store
- * Featured Coupon
- * Featured Deal
- * Featured Blog
- * Featured Review

This will allow the homepage to be controlled without developer involvement.

39. Content Status System

Content should support statuses such as:

- * Draft
- * Published
- * Scheduled
- * Active
- * Expired
- * Inactive

For coupons specifically, expired coupons should not be displayed as active offers.

40. Expiry Management

Coupons and deals should support expiry dates.

When an offer reaches its expiry date, the system should automatically:

- * Mark it expired/inactive
- * Remove it from active coupon listings
- * Prevent it from appearing as an active offer
- * Optionally retain it for historical/SEO purposes depending on SEO strategy

Final expired-content SEO behavior:
[TO BE PROVIDED]

41. Security Requirements

The website and CMS should include:

- * Secure authentication
- * Password hashing
- * Admin session security
- * HTTPS
- * Input validation
- * SQL injection protection
- * XSS protection
- * CSRF protection where applicable
- * Secure file uploads
- * Rate limiting where appropriate
- * Regular backups

CMS admin should not be publicly accessible without authentication.

42. CMS User

Initial CMS user:

1 Admin User

Admin username/email:

[TO BE PROVIDED]

The system should be architected so additional user roles can be added in the future if required.

43. Database Architecture

The backend/database should be structured around reusable entities rather than hardcoded pages.

Recommended core entities:

- * Users
- * Stores
- * Countries
- * Categories
- * Coupons
- * Deals
- * Blogs
- * Blog Categories

- * Reviews
- * FAQs
- * SEO Metadata
- * Homepage Sections
- * Site Settings

Final database architecture should be proposed by the developer.

44. Scalability

The website should be built with future expansion in mind.

Potential future features may include:

- * More countries
- * More admin users
- * User accounts
- * User-submitted coupons
- * Coupon voting
- * Coupon verification
- * Favorites
- * Email alerts
- * Cashback
- * Browser extension
- * Mobile application
- * Merchant partnerships
- * Automated coupon feeds/API integration

These features are not necessarily part of Phase 1 unless specifically agreed.

The architecture should, however, avoid making future implementation unnecessarily difficult.

45. Phase 1 Scope

The initial development scope should include:

Frontend

- * Homepage
- * Stores
- * Store Detail
- * Coupons
- * Coupon/Deal Detail where required
- * Blogs
- * Blog Detail
- * Reviews
- * Review Detail
- * About Us
- * Terms & Conditions
- * Privacy Policy
- * Contact Us

Backend

- * CMS
- * Admin authentication
- * Store management
- * Coupon management
- * Deal management
- * Blog management
- * Review management
- * Country/region management
- * Category management
- * Homepage content management
- * SEO management
- * Site settings

Technical

- * Responsive design
- * SEO-friendly architecture
- * Affiliate link support
- * Analytics integration
- * Security
- * Performance optimization

46. Information To Be Provided Later

The following information is intentionally left open and will be provided during development:

Branding

- * Logo
- * Colors
- * Fonts
- * Brand guidelines

Content

- * About Us
- * Terms & Conditions
- * Privacy Policy
- * Contact information
- * Homepage copy
- * Store descriptions
- * Blog content
- * Review content

Business

- * Affiliate networks
- * Affiliate tracking structure
- * Target countries
- * Target categories
- * Merchant list

Technical

- * Hosting
- * Server
- * Database preference
- * Email service
- * Analytics accounts
- * Domain/DNS access

47. Developer Deliverables

Developer should deliver:

1. UI/UX design
2. Responsive frontend
3. Backend
4. CMS
5. Database
6. Affiliate link functionality

7. SEO-friendly architecture
8. Search functionality
9. Region/country system
10. Coupon management
11. Store management
12. Blog management
13. Review management
14. Homepage management
15. Analytics integration
16. Security implementation
17. Performance optimization
18. Testing
19. Bug fixing
20. Deployment to production server

48. Testing Requirements

Before launch, the developer should test:

Functional

- * Navigation
- * Search
- * Store pages
- * Coupons
- * Deals
- * Blogs
- * Reviews
- * CMS
- * Affiliate links
- * Contact form
- * Country filters

Responsive

- * iPhone
- * Android
- * Tablet
- * Desktop
- * Multiple screen sizes

SEO

- * Meta titles
- * Meta descriptions
- * Canonicals
- * Sitemap
- * Robots.txt
- * Schema
- * Indexability
- * URLs

Performance

- * Page speed
- * Image loading
- * Database performance
- * Mobile performance

Security

- * Admin login
- * Authentication
- * Forms
- * CMS permissions
- * File uploads

49. Definition of Done

The project will be considered ready for launch when:

- * All agreed pages are developed.
- * CMS is functional.
- * Admin can manage website content.
- * Stores can be created/edited/deleted.
- * Coupons can be created/edited/deleted.
- * Deals can be created/edited/deleted.
- * Blogs can be created/edited/deleted.
- * Reviews can be created/edited/deleted.
- * Countries/regions can be managed.
- * Homepage content can be managed.
- * Affiliate links function correctly.
- * Website is responsive.
- * SEO structure is implemented.
- * Analytics/tracking is implemented.
- * Contact form works.
- * Security requirements are implemented.
- * Major bugs are resolved.

* Website is deployed successfully.

50. Important Development Principle

The website should NOT be developed as a collection of static pages.

It should be developed as a dynamic, database-driven affiliate content platform.

For example:

If the administrator adds a new store from CMS:

CMS → Add Store → Publish → Store automatically appears on Stores page → Store page is generated → Associated coupons can be displayed → Related blogs/reviews can be connected.

Similarly:

CMS → Add Coupon → Select Store + Country → Publish → Coupon automatically appears in relevant listings and store page.

This dynamic relationship between content types is a core requirement of GrabYourDealz.

51. Reference Website Analysis

The developer should use the supplied websites for UI/UX research and inspiration.

Revounts

Reference for:

- * Coupon/deal presentation
- * Store discovery
- * Deal-oriented layout
- * User journey

Coupenzo

Reference for:

- * Coupon platform structure
- * Store pages
- * Coupon organization
- * Content presentation

CouponFollow

Reference for:

- * Search-first experience
- * Trending coupons
- * Popular stores
- * Coupon cards
- * Country/region functionality
- * Content/FAQ structure

CouponFollow currently demonstrates a strong combination of trending coupons, staff picks, popular stores, country switching and informational content, which are useful reference points for GrabYourDealz. (CouponFollow)

52. Final Product Vision

GrabYourDealz should ultimately become a centralized destination where users can:

Search a brand → Find its store page → See available coupons/deals → Read reviews/blogs →
Select an offer → Click through to the merchant.

The website should combine:

Coupon Platform + Store Directory + Deals Platform + Blog/Content Platform + Review Platform
+ Affiliate Marketing System
into one scalable website.

The priority for Phase 1 should be:

User Experience + SEO + Speed + CMS Control + Affiliate Conversion + Scalability

53. Items Requiring Final Confirmation

The following items should be finalized before development starts:

1. Logo
2. Brand colors
3. Typography/font
4. Target countries
5. Target categories
6. Initial stores/brands

7. Affiliate networks
8. Affiliate tracking method
9. Hosting/server
10. Technology stack
11. Database
12. Analytics accounts
13. Social media accounts
14. About Us content
15. Terms & Conditions
16. Privacy Policy
17. Contact details
18. Email/SMTP details
19. SEO strategy
20. Expired coupon SEO strategy
21. Exact CMS requirements
22. Final UI/UX design
23. Launch date
24. Post-launch maintenance/support requirements
54. Developer Notes

This document represents the initial product and website requirements for GrabYourDealz.com.

Any functionality not explicitly listed in this document should be discussed and approved before being considered part of the development scope.

The developer should provide recommendations where a technical or UX improvement can make the website faster, more scalable, more SEO-friendly or more conversion-focused.

Any major change in:

- * Scope
- * Functionality
- * Architecture
- * Database
- * CMS
- * Third-party integrations
- * Affiliate tracking

should be discussed and approved before implementation.
